Survey Design of Japanese Panel Study of Employment Dynamics

1. Outline of the Survey	
Purpose of the Survey	Reveal dynamics and variation of employment and non-employment all over the country
Items surveyed	Status of employment, Living dynamics, Status of initial and previous employment, Attribute of individual person of the Previous one year
Survey volume	about 100 questions Survey 2024: 109 questions

2. Period of the Survey

Survey period	Survey period is fixed as every January
	January 4 ~ January 31, 2024

3. Coverage of the Survey

Survey districts	All over the country
Conditions of persons	Male and female 15 years old and over to be surveyed
Exclusion conditions	None (no condition on occupation/survey cooperation records)

4. Method of the Survey

Survey technique	Internet monitoring survey (Sample survey)
Sampling method	Extract persons satisfied the conditions by the monitor (Mighty monitor) possessed by Intage Inc.
Sample design	Based on "Labour force survey" data of Statistics Bureau, Ministry of Internal Affairs and Communications, allocation was implemented by gender, stratified age group, type of employment, district block, education background. The allocation was set to reflect the population. However, as for 10s of non-labour force, 65-69 years of non-labour force, and 70 years old and over, the allocation was adjusted less than actual count of persons.
Effective collection count/effective collection rate	 Survey 2024: 55,963 samples * From Survey 2018 onwards, each survey consists of 3 sample types, continued (previous year answerers), additional (new answerers of the year) and revived (answerers of Survey before 2022 who didn't answer Survey 2023). Continued samples (continuous answerers since last year): 42,977 persons Persons requested: 53,463 Effective collection rate: 80.4% Additional samples (new answerers, this year): 7,799 persons Persons requested: 15,138 Effective collection rate: 51.5% Revived samples (no answer in survey 2023, but answered in 2022): 5,187 persons Persons requested: 31,037 Effective collection rate: 16.7% * 10 samples out of the above are excluded from aggregating subjects due to overseas emigration
5. Aggregation Method	
Weighted sampling aggregation	Weighted sampling aggregation is necessary to implement aggregation according to the population construction since the collection was conducted with less allocation than actual count of persons for 10s and 65 - 69 years old of non-labour force, and 70 years old and over.

1. Outline of the Survey

In Japanese Panel Study of Employment Dynamics, following items were questioned in survey 2024 for the purpose of grasping status of employment, living dynamics, etc. during the previous one year prior to the survey (in case of survey 2024, one year period of 2023).

_			
Attribu			s of the Previous One Year
Q1	Gender	Q55	Level of happiness
Q2	Age	Q56	Life satisfaction
Q3	Birth month and year	Q57	Annual events and living
Q4	Present residential place	Q58	Annual occupational events
Q5	Final educational background	Q59	Self-development activities
Q6	Graduated faculty	Q60	Holiday acquisition condition
Q7 Q7-1	Present school year Faculty to plan to graduate from	Q61 Q62	Rate of taking paid leaves Health condition (Stress)
Q7-1 Q8	Dropout experience	Q62 Q63	Income source of living expenses
Q9	Marital status	Q64	How to cover the living expenses
Q10	With or without a child/children	Q65	Job upskilling
Q11	Number of children	Q66	On-the-Job-Training opportunity
Q12	Age of the child	Q67	Off-the-Job-Training opportunity
Q13	Type of residence	Q68	With or without self-development
Q14	Cohabiter	Q69	Work place status
Q15	Principal household income earner	Q70	Nature of work
	Labour force status of January ~April	Q71	Job satisfaction, career outlook
	Labour force status of May ~August	Q72	Stress of taking balance of work and family life
	Labour force status of September \sim November		s of Second Job
Q17	Labour force status of December	Q73	With or without taking second job
Status	as in Last December	Q74	Desire to take second job
Q18	Type of working	Q75	Reasons of desire to take second job
Q19	Type of employment	Q76	Reasons of taking second job
Q20	With or without store	Q77-1	Type of working of the highest income second job
Q21	Reasons of being engaged in work as in December	Q77-2	Content of work of the highest income second job
Q22	Reasons of absence from work	Q77-3	Job details of the second job that provided the highest income
Q23	Could be engaged in work upon availability?	Q77-4	If there is any store of the second job that provided the highest income
Q24	Desire to work	Q77-5	i Number of the second jobs
Q25	Degree of desire to work	Q78	Working hours per week of the second jobs
Q26	With or without job seeking	Status	s of Initial Employment
Q27	Reasons of seeking no job	Q79	Type of working of initial employment
Q28	Reasons of unemployment	Q80	Industry of initial employment
Q29	The reason of no desire to work	Q81	Number of employees of initial employment
Q30	Industry	Q82	Occupation of initial employment
Q31	Number of employees	Status	s of Previous Employment
Q32	Occupation	Q83	Type of working of previous employment
Q33	Position title	Q84	Industry of previous employment
Q34	With or without employment contract term	Q85	Number of employees of previous employment
Q35	Employment contract term	Q86	Occupation of previous employment
Q36	Status of employment (unemployment) insurance coverage	Q87	Number of working days/hours in previous employment
Q37	Working days and hours per week	Q88	Annual income of previous employment
Q38	Presence of request to increase/decrease the work hours	Q89	Channels to find current place of work
Q39	Degree of increase/decrease in work hours	Q90	Order of timing between the last resignation and adoption of current employment
Q40	Possibility to increase work hours and content of work	Q91	Reasons of the last resignation
Q41	Reason of not possible to increase work hours even when wanting to increase them		s around the Delivery of the Youngest Child
Q42	Salary payment method	Q92	Working status before and after the birth of your youngest child / child of currently aged 1 to 5 years
Q43	Hourly rate Work flowibility	Q93	Working status before and after the birth of your youngest child / child of currently one year old System used at the birth of the youngest child (female) / child of currently aged 1 to 5 years
Q44	Work flexibility	•	
Q45	Working place Job style	-	System used at the birth of the youngest child (male) / child of currently aged 1 to 5 years
Q46 047		-	Number of consecutive days taken for childcare leave Number of days of annual paid leave taken for childcare
Q47 Q48	Job percentage Commuting methods	Q95-2 Others	
	Time for living (Commutation)	Q96	s Residential place
	Time for living (Commutation) Time for living (Housework, childcare)	Q96 Q97	Academic achievement at the last junior high school year
•	Time for telework	Q97 Q98	Academic achievement at the last junior high school year Month and year of school graduation, month and year of entry to and resignation from the initial employment,
Q50 051	Status of telework	420	
Q51 052	Status of telework system introduction and adoption Subject person to telework system		month and year of entry to and resignation from the previous employment, month and year of entry to the current employment
Q52		000	
Q53	Condition of HRM at the workplace	Q99	Annual income of the previous year (main job, second job, non-occupational)
Q54	Number of resignation times in the past	-	With whom can you consult?
			Type of working of the spouse
			Event in work (resignation or employment of spouse)
		-	Annual income of the spouse
		-	With or without doing nursing care
		-	Desire for changing or hunting job
			Approach taken related to future career plan in the past one year
		-	Desired future plan after graduation
		Q108	Decision of occupation after graduation

Q109 Job-hunting experience

2. Period of the Survey

As the purpose is to grasp the status of the previous one year prior to the survey period, the survey period is fixed as every January. The survey 2024 was actually implemented from January 4 to January 31, 2024.

3. Coverage of the Survey

The subjected persons are male and female of 15 years old and over, and without upper age limit. The survey was implemented not as a complete census but sample survey. (Refer to "4. Method of the Survey")

4. Method of the Survey

Internet monitoring survey was used as the technique of survey by asking the monitors for the survey after extracting male and female of 15 years old and over. The survey applied the system to receive answers on internet screens.

When monitors are surveyed, discrepancy would be seen in age and occupation construction between monitors and the population subject to survey. In order to conduct the survey with representativeness reflecting the population as much as possible, necessary sample numbers were calculated by gender, stratified age group, type of employment, district block and education background, then collected answers aiming these numbers (allocation).

On this stage, if the samples are allocated according to the population construction, total volume of unworking groups of 10s and 65 - 69 years old, and 70 years old and over increases and results decrease of sample numbers of working people groups on the target for the desired close analysis. Therefore, the survey was designed to obtain larger number of working people samples by allocating less figures to non-labour force of 10s and 65 - 69 years old, and 70 years old and over.

(Refer to Reference (1) "Production method of population value data and allocation by gender, stratified age group, type of employment, district block and education background")

In survey 2024, at first we asked all the people who could be requested out of the answerers of survey before 2023 (continued samples and revived samples), to answer the survey. 84,500 persons could be requested for the survey as they remained in the monitor. 48,164 persons answered out of the above number. In the next stage, new answerers were extracted from the monitor and asked for the survey, imagining deficient cells to be filled up for the allocation. Out of the requested 15,138 persons, answers were obtained from 7,799 persons. In survey 2024, total number of effective samples was 55,963. (Refer to "Reference (2) Allocation and collection count")

*Measures such as delaying the distribution date were taken for Ishikawa, Toyama, Niigata, and Fukui prefectures considering the effects of the earthquake in the Noto Peninsula area. Therefore, the collection amount of those areas slightly declined compared to other years.

5. Aggregation Method

Weighted sampling aggregation is necessary to implement aggregation according to the population construction so that the number of the samples can get near to the population value calculated in the stage of sample design in "4. Method of the Survey", since less figures than actual count of persons were allocated to 10s and 65 - 69 years old of non-labour force, and 70 years old and over. (Refer to "Reference (3) Calculation method of weighted values" and "Reference (5) Calculation method of weighted values")

It is verified that big bias can be eliminated from the survey results even compared with official statistics by allocation with smaller segmentation under consideration of the representativeness in the stage of sample design, then making correction by weighted aggregation. (Refer to "Reference (4) Comparison of the survey results and official statistics")

Reference (1) Production method of population value data and allocation by gender, stratified age group, type of employment, district block and education background

<Data production procedures>

- I. Produce population data: Produce population data using multiple official data adapting to the targeted allocation cells
- II. Correct population data for allocation: Adjust number of persons in the population
- III. Produce allocation: Make allocation adapting to the population data construction after correction

<Data production procedures in detail>

I. Produce population data:

Produce population data using multiple official data adapting to the targeted cells for allocation

I-i. Produce basic data

<Data used>

"Table II Population aged 15 years old and over by status of employment, position of employment, type of employment, marital status, and age group" from October to December 2022 version "Labour Force Survey (Basic Tabulation) by Region" issued by Statistics Bureau, Ministry of Internal Affairs and Communications

• Extract number of persons of self-employed workers, family workers, executives of company or corporation, regular employees, non-regular employees, unemployment and non-labour force by gender age group (divided by 10s) for each area of whole Japan (divided by 11 areas), from "Table II Population aged 15 years old and over by status of employment, position of employment, type of employment, marital status, and age group" of October to December 2022 version "Labour Force Survey (Basic Tabulation) by Region"

 \ast The latest yearly data are used

• Data are produced by following cells x 11 areas

		Labour force						Non-labour force
		Self employed	Family	Executive of	Regular	Non-regular	Unemployment	
		worker	worker	company or	employee	employee		
				corporation				
Male	15 - 24 years old							
	25 - 34 years old							
	35 - 44 years old							
	45 - 54 years old							
	55 - 64 years old							
	65 years old and over							
Female	15 - 24 years old							
	25 - 34 years old							
	35 - 44 years old							
	45 - 54 years old							
	55 - 64 years old							
	65 years old and over							

I-ii. Age group division change (by 5 from 10 years) <Data used>

"Table I-2 Population aged 15 years old and over by status of employment, position of employment, type of employment (number of employees for non-agricultural/forestry industry employees), main activity status, agriculture/forestry, non-agricultural/forestry, type of household, family type of household and age group" from October to December 2022 version "Labour Force Survey (Basic Tabulation) Whole Japan" issued by Statistics Bureau, Ministry of Internal Affairs and Communications

• The data in I-i are divided into groups of 10 years, therefore the above data are divided so that 15 - 24 years old becomes 15 - 19 years old/20 - 24 years old, and 65 years old and over becomes 65 - 69 years old/70 - 74 years old/75 years old and over

(Get the rate of 15 - 19 years old out of 15 - 24 years old, then multiply the data of 15 - 24 years old by the rate to get number of persons. For other age segments, the same procedures are to be followed as above.)

- On this stage, utilise the data corresponding to the segments by self-employed workers, family workers, executives of company or corporation, regular employees, non-regular employees, unemployment, non-labour force that were sorted in I-i
 - * As for executives of company or corporation, the data of regular employees are used
 - * The data uniformed throughout the country are used
- In this way, cells will be arranged as follows;

		Labour force						Non-labour force
		Self employed	Family	Executive of	Regular	Non-regular	Unemployment	
		worker	worker	company or	employee	employee		
				corporation				
Male	15 - 19 years old							
	20 - 24 years old							
	25 - 34 years old							
	35 - 44 years old							
	45 - 54 years old							
	55 - 64 years old							
	65 - 69 years old							
	70 - 74 years old							
-	75 years old and over							
Female	15 - 19 years old							
	20 - 24 years old							
	25 - 34 years old							
	35 - 44 years old							
	45 - 54 years old							
	55 - 64 years old							
	65 - 69 years old							
	70 - 74 years old							
	75 years old and over							

.

I-iii. Calculation of number of persons attending school <Data used>

"Table I-2 Population aged 15 years old and over by status of employment, age group, main activity status, agriculture/forestry, non-agricultural/forestry, whether wishing to work, marital status, type of household, relation to the head of household, and education background" from October to December 2022 version "Labour Force Survey (Detailed Tabulation) Whole Japan" issued by Statistics Bureau, Ministry of Internal Affairs and Communications

- From the above data, ratios of "attending schools" for labour force/non-labour force by gender age (divided into groups of 10 years) are calculated. The results are multiplied by the basic data to get the count of persons "attending school" by labour force/non-labour force x gender age (divided into groups of 10 years)
 - * Since there are no data by labour force breakdown (self-employed, regular employees, etc.), the ratio is as uniformed for every type of employment
 - * Since there are no data by each region, whole Japan data are used
 - In the above way, Labour force Jon-labour fo attending school was Regular Non-regular Unemployme Family Evecutive of orker vorker company or mployee employee extracted and arranged orporation Attendi as in following cells; Attendin chool school 15 - 19 years old Male 20 - 24 years old 25 - 34 years old 35 - 44 years old 45 - 54 years old 55 - 64 years old 65 - 69 years old 70 - 74 years old 75 years old and o Female 15 - 19 years old 20 - 24 years old 25 - 34 years old 35 - 44 years old 45 - 54 years old 55 - 64 years old 65 - 69 years old 70 - 74 years old 75 years old and over

I-iv. Divide persons other than attending school into the groups of below university graduates and university graduates or higher

<Data used>

"Table I-2 Population aged 15 years old and over by status of employment, age group, main activity status, agriculture/forestry, non-agricultural/forestry, whether wishing to work, marital status, type of household, relation to the head of household, and education" from October to December 2022 version "Labour Force Survey (Detailed Tabulation) Whole Japan" issued by Statistics Bureau, Ministry of Internal Affairs and Communications

- Like as in I-iii, ratios of below university graduates and university graduates or higher for the persons "graduated from" by labour force /non-labour force x gender age (divided into groups of 10 years) are calculated. The results are multiplied by the basic data to get the count of persons by education background (below university graduates/university graduates or higher)
 - * Since there are no data by labour force breakdown (self-employed, regular employees, etc.), the ratio is as uniformed for every type of employment
 - * Since there are no data by each region, whole Japan data are used
- Now, the count of persons of the population adapted to the aimed allocation cells is completed. Produce 3,168 cells (cells x 11 areas = 3,168) as below;

		Hokkaido															
		Labour fore	10												Non-labou	foreo

	55 - 64 years old	2	1	0	0	1	1	10	7	3	2	1	0	0	2	1	0
	65 · 69 years old	1	0	0	0	1	0	2	1	2	1	0	0	0	5	2	0
	70 · 74 years old	1	0	0	0	1	0	1	0	2	1	0	0	0	9	3	0
	75 years old and over	1	0	0	0	1	0	0	0	1	0	0	0	0	23	7	0
Female	15 - 19 years old	0	0	0	0	0	0	0	0	1	0	0	0	1	0	0	8
	20 - 24 years old	0	0	0	0	0	0	2	1	1	1	0	0	3	0	0	3
	25 · 34 years old	1	0	0	0	0	0	6	6	4	3	1	0	0	2	1	0
	35 - 44 years old	1	0	0	0	0	0	7	3	7	4	1	0	0	5	2	0
	45 - 54 years old	1	0	1	0	1	0	10	3	12	3	0	0	0	6	1	0
	55 · 64 years old	1	0	1	0	1	0	6	1	11	2	1	0	0	9	2	0
	65 - 69 years old	0	0	1	0	0	0	1	0	4	0	0	0	0	10	1	0
	70 - 74 years old	1	0	1	0	0	0	1	0	3	0	0	0	0	17	1	0
	75 years old and over	1	0	1	0	0	0	0	0	1	0	0	0	0	51	3	0

* Created population data using data of October to December 2022 since the data of October to December 2023 are not disclosed yet at the time of survey implementation. Weighted tabulation is used to assign back to the composition of the population data created by the data of October to December 2023 at the tabulation phase since the data of October to December 2023 will be disclosed by the end of the survey

II. Correct population data for allocation: Adjust number of persons in the population

II-i. Reduce the actual count of persons 70 years old and over by half

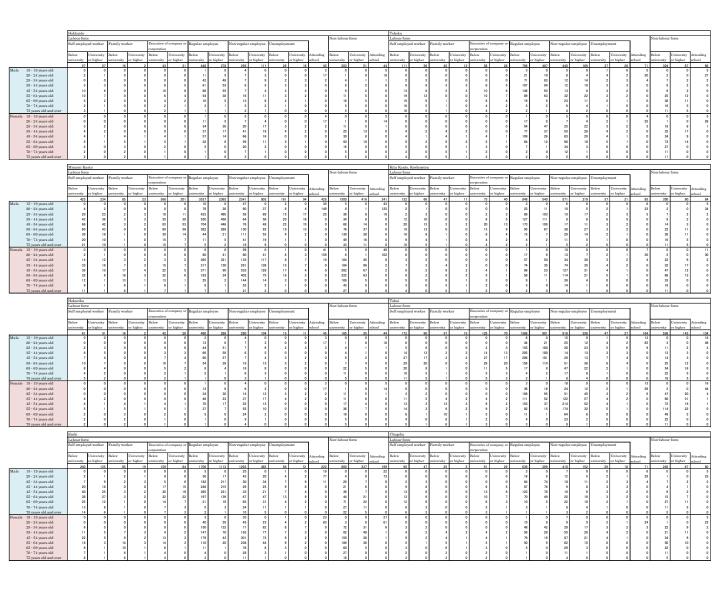

- Reduce actual data of number of persons for each cell of 70 74 years old and 75 years old and over by half
- II-ii. For generation of 10s and 65 years old and over, make the non-labour force a half of the labour force
- As for age groups 15 19 years old, 65 69 years old, 70 74 years old and 75 years old and over, make the total of non-labour force count a half of the labour force
- The construction of education background (below university graduates/university graduates or higher/attending school) within the non-labour force is to be kept same as of the original population construction.

II-iii. After adjustment, construction ratio of the population is calculated

• Calculate overall construction ratio of each cell for the population data in II-ii

III. Produce allocation: Make allocation adapting to the population data construction after the correction

- Allocate 43,000 persons adapting to the construction ratio calculated in II-iii
- Now, allocation of 3,168 cells is completed (18 x 16 cells x 11 areas = 3,168). Actual survey was implemented aiming the number of persons to be collected for the allocation

- * Above data show total of whole Japan. In detail, total throughout the country by 11 areas. Figures in the brackets represent number in deficiency
- * 10 samples are excluded from the above collection count for this year survey due to their overseas emigration

Reference (3) Calculation method of weighted values of the survey

<Calculation procedures>

- I. Calculate number of persons for each cell in case collection can be made up according to the population construction
- II. Calculation of weighted values

<Calculation procedures in detail>

I. Calculate number of persons for each cell in case collection can be made up according to the population construction

I-i.

• Using the data of October to December 2023, create the data on the number of people in the population following the same procedure as the reference -I and calculate the entire component ratio for each cell

However, 70 - 74 /75 years old and over cells will be included in one cell with 70 years old and over.

I-ii.

• Calculate number of persons for each cell in case of collection of 55,953 can be made up according to the population, multiplying 55,953 excluded 10 samples of overseas emigrants out of the effective answer count of the survey by overall construction ratio of the population

II. Calculation of weighted values

- Calculate the coefficient (weighted value) to make the actual collection count for each cell as the same number of persons calculated in I-ii
- The calculation was handled in the following 3 patterns; As for unemployment and non-labour force, the weighted value calculated with Pattern A is to be used; As for labour force of ages between 15 and 24, and 65 or over (excluding completely unemployed persons), the weighted value calculated with Pattern B is to be used; As for labour force of ages between 25 and 64, the weighted value calculated with Pattern C is to be used.

Pattern A: Number of all cells of the population produced in Reference (1)-I (2,816 cells)

- Pattern B: 96 cells for other age groups by gender, stratified age group, status of employment, education background.
- Pattern C: 1,056 cells for 25 64 years old by gender, stratified age group, status of employment, education background and areas.

Pattern A * Hokkaido only as an example

Calculate the coefficient to make the left table figures as the same ones in right table

= weighted value Pattern A

As for unemployment and non-labour force in blue frames, the weighted value calculated in this way is to be used

* For attending school cells of labour force, Pattern A is to be used only for the persons of unemployment

Pattern B & Pattern C * All over the Country and Hokkaido as an example

Calculate the coefficient to make the left table figures as the same ones in right table = weighted value Pattern B and Pattern C

Pattern B: For labor force of 15 - 24 years old and 65 years old and over (excluding unemployment) in blue frames, the weighted value calculated in all areas of the country is used.

Pattern C: For labor force of 25 - 64 years old (excluding unemployment) in red frames, the weighted value calculated in each area is used.

Reference (4) Comparison of the survey results and official statistics

Comparison between aggregated results in the survey (after weighted aggregation) and construction ratio in official statics shows as below; The results of this survey appear not strongly biased, even compared with official statics.

<Construction ratio by gender, stratified age group and type of employment>
